GIFT GAZEBO COMPLETED, INSTALLED IN VILLAGE OF REESEVILLE FIREMAN'S PARK

Village Board member wins client appreciation drawing at
Kunkel Engineering Group gathering

REESEVILLE, WIS. – Construction of the Village of Reeseville's new Fireman's Park gazebo, a gift from Kunkel Engineering Group of Beaver Dam, has been completed and installed, village officials confirmed.

The all-wood, oval structure, complete with an asphalt shingle roof, a hardwood floor and architectural detail measures 14 feet long by 12 feet wide and was the prize in a drawing held at a September 2007 client appreciation and wine tasting event at Kunkel Engineering Group. Reeseville Village Board Member Brian Miller attended the event, entered his name in the drawing and won. The event was also a celebration of President and Founder Craig Kunkel's 25 years of leadership in the engineering business.

"The idea behind the event was to extend a warm and sincere thank you to our clients and to showcase the projects we had undertaken and completed on their behalf since the founding of Kunkel Engineering Group in 2000," Kunkel said. "The drawing for the gazebo was simply an extension of that initiative and one that we hoped would well-suit our client communities and provide an additional enhancement to the town, village or city that won it in the drawing.

Reeseville village employees Dean Ziegel, Darrell Ritter and Scott Hembrook completed the construction of the pre-fabricated structure.

"Gazebos are a natural gathering spot and representative of the welcoming atmosphere we work with our client communities to provide," Kunkel added. "We are pleased to see it completed and installed in the park next to the Reeseville Community Center and we hope that it will provide years of enjoyment to village residents and visitors."

Founded in 2000 and headquartered in Beaver Dam, Kunkel Engineering Group is a full-service municipal engineering and design firm employing 17.
